Employee Guide to **WolMobile**

Introducing **WolMobile**

Your organization has recently implemented the workplace safety app WolMobile. Here's an overview of what the app does, why it's used and what it means for you as an employee or service provider.

What is WolMobile?

WolMobile is a smartphone app for iOS and Android, designed to keep you safe while at work.

WolMobile offers the following features:

- Automatic sign in/out for work, so you no longer need to remember to manually sign in for work, and your employer knows who is on-site in the case of an emergency.
- Instant Messages, so your employer can communicate work updates or hazards with you quickly and easily.
- SOS Alerts, so you can ask for immediate assistance if required.
- Follow Me, so those working alone, at risk, or travelling between sites can be easily located for safety reasons.

Note: Talk to your WhosOnLocation account Administrator(s) if you'd like to know more about the features your organization is using.

Does WolMobile work on all devices?

WolMobile has been designed for iPhones running iOS 10 and above, and Android phones running Android 5.0 and above.

Why does WhosOnLocation need access to my phone's location?

WolMobile needs access to your location permissions for the following features to work effectively.

Automatic sign in/out - If your organization is using this feature, they will have set up a geofence around your place of work. Once your phone is registered as having crossed this fence (using your location information), you'll be automatically signed in or out.

SOS Alerts - Should you need to send for immediate help, tapping the SOS button will send your location information to a nominated SOS Responder within your organization. We send your location information as part of this alert so someone can come to your aid as quickly and efficiently as possible.

Follow me - If you're working at risk, alone or travelling between sites, your organization may ask you to use the 'Follow Me' feature. This feature is designed for your safety, so a nominated safety contact at your place of work can find you quickly in an emergency, or check in with you throughout the day.

Locations list - If your organization has multiple sites, WolMobile will use your location in a similar way to Google Maps, providing directions and ordering the list with the closest locations first.

Working remotely - If you sign in to work remotely, WhosOnLocation will log your location once as you sign in, and again as you sign out. This is for your safety, so your employer has an idea of your whereabouts in the case of an emergency. We won't continue to report on your location throughout the day, unless you enable the Follow Me feature.

Do I need to select 'Always allow' or "When using the app' in my location settings?

Please select 'Always allow' when prompted, for the automatic sign in / out feature to work accurately and to get the full functionality from the app.

Will you be tracking my location at all times?

No. Although WolMobile needs access to your location settings, we'll only report on your location in WhosOnLocation whilst you're signing in / out for work and when using the Follow Me feature. Once you sign out and finish work at the end of the day, your location will no longer be reported on in WhosOnLocation.

It's also worth noting that only selected individuals with admin access to WhosOnLocation will be able to see your location whilst you're signed in.

Will WolMobile drain my battery?

Using WolMobile for the auto sign in/out feature, and to manually/periodically update your geolocation will use minimal battery.

We have developed WolMobile to be as battery efficient as possible. The auto sign in/out feature uses circular geofences to minimize battery usage, and we put measures in place to restrict the number of times the app checks for a location update.

If you use the follow me feature to continually report on your location, this will use significantly more battery as the app is constantly active. Your location will also be checked more often as you approach a geofence (for accuracy). So if you live very close to your place of work, you may notice a slightly higher than average battery usage.

To see how much battery WolMobile has used since you last charged your phone, check the app section under your device's settings.

Why does WolMobile need access to my Notifications?

By granting WolMobile access to your notifications, you'll be allowing WolMobile to send you Push Notifications.

Push Notifications are only sent from your employer, and will relate to important news, updates or hazards for your workplace.

Do I need to be connected to Bluetooth to use WolMobile?

To effectively sign you in or out automatically, your organization may need to use Bluetooth beacons. Please talk to your WhosOnLocation Account Administrator to understand if you need to enable Bluetooth to sign in.

New features, updates and improvements to the app will be released on an ongoing basis.
