Stopping Gesture Zooming on Touch screen Kiosks

For touch screen Kiosks

We recommend if using a touchscreen that you go to the Windows Control Panel on the kiosk, select Pen and Touch, select the Touch tab, and un-tick the Enable multi-touch gestures and inking.

This will stop the touch screen from accidentally expanding and contracting the display when visitors accidentally double-tap the screen with their fingers. Just like an iPhone or Android phone, touch monitors are sensitive and are designed to (magnify) increase and decrease display resolutions with double taps.
